HYDRAULIC CLAMPING TECHNOLOGY

General information

General information

Clamping of workpieces for machining purposes has a major effect on the product quality, the manufacturing times, the degree of machine utilisation, the operator's safety and on the production plant. The emphasis is on secure clamping and rapid changing of the workpieces.

The clamping forces must be high enough to clamp the workpieces safely even when being exposed to varying loads.

Requirements of modern clamping equipment:

- Simple, rapid and safe handling
- Wide variety of applications, re-usable
- Easily exchangeable
- Low costs per clamping point
- High output per time unit
- High quality of the machined workpieces

The profitability and rationalisation effect essentially depend on the choice of the correct clamping equipment. The electrical and air hydraulic power clamping system of DE-STA-CO meets these requirements and helps to solve the various problems of clamping.

The system

The power sources, clamping elements and accessories shown in this catalogue are products which meet all the demands of modern clamping systems. The clamping system can be connected to any pneumatic, hydraulic and electrical network. If none of the energy sources is available, the required clamping pressure can be produced by a hydraulic hand pump (e.g. in smaller workshops and building sites). The benefits and effects of the system remain the same, regardless of the choice of the energy source. The clamping system operates with high pressure hydraulics; it allows to transfer high clamping forces by the use of relatively small clamping elements. This offers the advantage to use small, mobile devices. A particular advantage of this electrical and air hydraulic power clamping system is its application both in large high capacity production plants and small series production. Furthermore, it is used in fixed cycle operation on machine tools.

The clamping elements simultaneously clamp on various and remote clamping points with only one control valve. The clamping system's flexibility and its wide range of accessories allow to clamp even complex and irregularly shaped parts. The clamping pressures can be repeated as often as necessary. All system elements are supplied ex works along with international standard pipe thread connectors or NPT-thread connectors. Adaptors (supplied free of charge along with the unit) allow to connect the NPT-threads to different types of threads or screw connections.

Assembly and Connection

Alignment, assembly and connection can be carried out easily and quickly without special tools. The power sources, such as pressure convertors, air hydraulic pumps or electrical hydraulic pumps, are first connected to the pneumatic or electrical networks. Thereafter, they are connected to the clamping units. It is also possible to directly connect the clamping units to an already existing hydraulic network. However, the pressure produced by the hydraulic network must never exceed the maximum operating pressure of the clamping units. Before actuating the clamping system, it must be ventilated at its highest point.

This procedure is explained in detail in the assembly instructions delivered along with the power sources.

Information on seals

All seals are made of BUNA N. This material is suitable for gas, air, hydraulic oil and mineral oil based liquids (water-glycol- mixtures). The material BUNA N is not suitable for hardly combustible hydraulic liquids, brake fluids, cetones and acids. Also cooling fluids are not always compatible with standard seals and may affect compatibility characteristics of sealing material.

BUNA N seals are designed for maximum operating temperatures of 110 °C. For operating temperatures exceeding 110 °C, VITON seals having a maximum operating temperature of 210 °C must be used.

The seals are designed for a maximum stroke speed of $V_{max} = 0,5 \text{ m/sec}$.

Approved oil

Hydraulic oil: HLP according to the DIN 51524 Part 2

Viscosity range:

min. 22 mm²/s, max. 68 mm²/s

Recommended viscosity grade:

ISO VG 32 or VG 46 DIN 51519

Filtering:

use only filtered hydraulic oil of 25 µm absolute.

HYDRAULIC CLAMPING TECHNOLOGY

General information

Information concerning technical units (SI units)

Force

NIn accordance with the international unit system, force is denoted in Newtons (N).

One Newton is the force which accelerates a mass of 1 kg by 1 m/s².

$$1 \text{ N} = 1 \text{ kg m/s}^2$$

In this catalogue, force is expressed in kN

$$1 \text{ kN} = 1000 \text{ N}$$

Pressure

The unit of pressure in the SI system is the Pascal (Pa). Pressure is still stated in this catalogue in bar.

$$1 \text{ bar} = 10^5 \text{ Pa}$$

$$1 \text{ bar} = 10 \text{ N/cm}^2 (= 1,02 \text{ kp/cm}^2)$$

Connection example

Single action hydraulic clamp connected to an air-hydraulic pump

HYDRAULIC CLAMPING TECHNOLOGY

Pressure converter | pneumatic-hydraulic | single acting

Operating pressure max. 225 bar, 230 bar
Ratio 1:32, 1:33

Compressed air from the mains is converted into hydraulic high pressure by these pressure converters. Without this converting facilities, many clamping problems cannot be solved at all or only at high costs.

Technical characteristics

- The large oil tank automatically supplies the system with fresh oil according to the needs.
- Hydraulic piston with guide rings.
- The backstroke is produced by spring retraction. This offers the advantage of low air consumption and a single valve system.
- The moving parts are made of corrosion protected materials.

Contrary to hydraulic pumps, the maximum output of the pressure converter is restricted to one stroke. The amount of oil required per stroke is calculated as follows:

$$\text{Cylinder number} \times \text{piston surface} \times \text{stroke}$$

ATTENTION: A reserve of 20% should be taken into account!

Included accessories

- Connecting nipple R-1/4-1/4NPT (Air side)
- Adapter SAE4-1/4NPT (Oil side)
- Straight screw connection D8L-1/4NPT (Oil side)

Model no.	Ratio	Air pressure		Air consumption	max. operating	Oil quantity/	oil volume	A	B	D	H	H1	Connection		Weight

HYDRAULIC CLAMPING TECHNOLOGY

Pressure converter | pneumatic-hydraulic | single acting

Operating pressure max. 210 bar Ratio 1:32

Compressed air from the mains is converted into hydraulic high pressure by these pressure converters. Without this converting facilities, many clamping problems cannot be solved at all or only at high costs.

Technical characteristics

- Metal oil tank with oil level indicator
- Fast backstroke by the 2. air line
- Works in vertical and horizontal position

CUSTOMER BUILD VERSIONS (E. G. HIGHER PRESSURE, HIGHER OIL QUANTITY/STROKE) POSSIBLE.

Contrary to hydraulic pumps, the maximum output of the pressure converter is restricted to one stroke. The amount of oil required per stroke is calculated as follows:

$$\text{Cylinders number} \times \text{piston surface} \times \text{stroke}$$

ATTENTION: A reserve of 20% should be taken into account!

Included accessories

- Screw connection CK-1/4-PK9 (Air side)
- Screw connection CK-3/8-PK9 (Air side)
- Adapter GWR-3/8-1/4 (Oil side)
- Screw connection D8L-1/4 (Oil side)

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic hand pump | single acting

Operating pressure max. 350 bar

Workpieces can be efficiently clamped using this two-speed hydraulic pump with our single acting hydraulic clamping cylinders. If compressed air or hydraulic mains supply are not available (e. g. out-doors assembly work, energy failure etc.), the clamping units can be supplied with high pressure by means of this hand pump. Furthermore, this pump can be used to raise loads, to align or dismantle components, for carrying out adjustments and clamping procedures, and for a wide variety of other applications.

Features

- All metal constructions, won't burn through in welding environments
- Two-speed reduces handle strokes so you work faster and easier
- Formed metal handle provides less flex, and reduces operator fatigue
- Relief valve inboard of check valve prevents loads from drifting down
- Large valve knob gives added control for slowly metering loads down

Included Accessories

1 Reducing nipple, Model no. **PTRS-1/4 NPT**

1 Straight screw connection, Model no. **D8S-1/4 NPT**

HYDRAULIC CLAMPING TECHNOLOGY

Air hydraulic pump

Operating pressure max. 210 bar/700 bar

Conversion ratio 1:30, 1:100

Compact Air-hydraulic-pump for single acting hydraulic tools. This air hydraulic pump can activate a higher number of clamping cylinders simultaneously due to the tank volume of 1600 cm³. The compact lightweight design allows to set up the pumps wherever required. Actuating by foot control valve.

Technical features

- Switching on the pump and releasing the hydraulic systems pressure is carried out by foot valve activation
- integrated back pressure valve prevents pressure loss in the clamping circuit
- In case of a pressure drop > 10 bar within the pressure circuit, the pump automatically restarts to pump oil in Order to restore the set pressure
- Reservoir made of aluminium

Included accessories

1 Transition nipple **R1/4-1/4 NPT**

1 Reducing nipple **PTRS-1/4 NPT**

1 Straight screw connector

D8S-1/4 NPT

HYDRAULIC CLAMPING TECHNOLOGY

Air hydraulic pump

Operating pressure max. 700 bar

Conversion ratio 1:100

Compact Air-hydraulic-pump for single acting hydraulic tools. This air hydraulic pump can activate a higher number of clamping cylinders simultaneously due to the tank volume of 1600 cm³. The compact lightweight design allows to set up the pumps wherever required. Actuating by remote control valve.

Technical features

- Switching on the pump and releasing the hydraulic systems pressure is carried out by remote control activation
- integrated back pressure valve prevents pressure loss in the clamping circuit
- In case of a pressure drop > 10 bar within the pressure circuit, the pump automatically restarts to pump oil in Order to restore the set pressure
- Reservoir made of aluminium

Included accessories

- Transition nipple **R 1/4-1/4 NPT**
- Reducing nipple **PTRS-1/4 NPT**
- Straight screw connector **D8S-1/4 NPT.**

HYDRAULIC CLAMPING TECHNOLOGY

Air hydraulic pump

Operating pressure max. 700 bar

Conversion ratio 1:100

Compact Air-hydraulic-pump for single- and double acting hydraulic tools. This air hydraulic pump can activate a higher number of clamping cylinders simultaneously due to the tank volume of 1600 cm³. The compact lightweight design allows to set up the pumps wherever required. Actuating by manual control valve.

Technical features

- Switching on the pump and releasing the hydraulic systems pressure is carried out by manual control valve activation
- integrated back pressure valve prevents pressure loss in the clamping circuit
- In case of a pressure drop > 10 bar within the pressure circuit, the pump automatically restarts to pump oil in Order to restore the set pressure
- Reservoir made of aluminium

Included accessories

- 1 transition nipple **R 1/4-1/4 NPT**
- 2 reducing nipple **PTRS-1/4 NPT**
- 2 straight screw connector **D8S-1/4 NPT**.

HYDRAULIC CLAMPING TECHNOLOGY

Air hydraulic pump

Operating pressure max. 150 bar/360 bar/600 bar
Conversion ratio 1:25/1:60/1:1000

These air hydraulic pumps are designed for various hydraulic applications, especially for intermittent operation. By connecting a 3/2- way or 4/2- way pneumatic valve, the built-in hydraulic valves for stroke and backstroke can be actuated. The pumps are complete, and only have to be connected to the existing compressed air supply.

Technical characteristics

- Double piston pump-therefore pressure build-up almost pulsation free
- Compact pump - low required space
- 3 different conversion ratios available
- integrated back pressure valve prevents pressure loss in the clamping circuit
- In case of a pressure drop > 10 bar within the pressure circuit, the pump automatically restarts to pump oil in Order to restore the set pressure

Recommended accessories (separate Order)

- 1 4/2-ways manual-control-valve **800416**
- 1 3/2-way-foot-control-valve **FP-3-1/4-H**
- 2 screw-in connections **CK-1/4-PK6**
- 1 screw-in connections **CK-3/8-PK9**

HYDRAULIC CLAMPING TECHNOLOGY

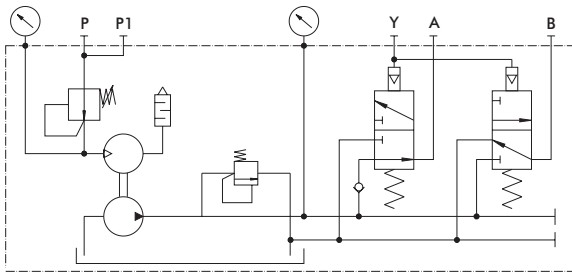

Air hydraulic pump

Connection diagram:

in this connection diagram you can see an air hydraulic pump, double action, with pneumatic control. On a single action design, the connection B does not apply.

Clamping circuit combinations

1 clamping circuit*, double action*
713D15051-1, 713D36051-1, 713D60051-1

* Pumps with more circuits, with electrically controlled valves, positioning circuit or accumulator control unit circuit are also available.

HYDRAULIC CLAMPING TECHNOLOGY

Electro hydraulic pumps

Electro hydraulic pumps series 718D...

This hydraulic power pack is used for machine tools (lathes and milling machines), jigs or general machine applications for permanent and intermittent operation.

Optionally the hydraulic power pack is available with electronic control. After the unit has been filled with hydraulic oil and connected to the electrical supply, the equipment is immediately ready for operation.

Technical data:

1. General parameters:

- Oil immersed compact hydraulic power pack for permanent and intermittent operation (operation modes S2, S3, S6)
- Radial piston pump and/or gear pump with integrated motor
- Cooling via finned tubular tank with additional fan wheel
- Mounting position: horizontal
- 3 pump/tank standard combination
- Connection block with idle circulation valve
- Valve block with seat valves in sandwich structure-extendible

2. Hydraulic parameters:

- Operating pressure up to 350 bar
- Output flow 2,15–4,5 l/min (pressure-dependent)
- Tank capacity gesamt 3,7–11,2 l (size-dependent)
- Usable tank capacity 1,7-8,2 l (size-dependent)

3. Electrical parameters:

- Standard: 3-phase motor (optimal 1-phase motor)
- Nominal output 1,5/ 2,2 kW
- Nominal speed 1410 1/min
- Nominal voltage 3~400/230V 50Hz
- Nominal current 3,5A/ 6,1A
- $\cos \varphi$ 0,83
- Operating mode: short time rating (S2), intermittent service (S3), continuous periodically use-load...unload (S6)
- Temperature switch: switch off the pump if the fluid temperature rises over 80°C

Model no.	max. operating pressure [bar]	Output flow max. [l/min]	Clamping-circuits	Reservoir oil quantity [l]	usable oil quantity [l]	Motor voltage	Motor rating [kW]	Valve voltage	Connection	Weight [kg]

Electro-hydraulic-pump 718D3500201

Features

- Compact unit with radial piston pump
- 1 clamping circuit (extendible), circulation valve
- max. operating pressure 350 bar
- Max. output flow 2,15 l/min

Electro-hydraulic-pump 718D3500402

Features

- Compact unit with radial piston pump
- 2 clamping circuits (extendible), circulation valve
- max. operating pressure 350 bar
- Max. output flow 3,35 l/min

Electro-hydraulic-pump 718D2100402

Features

- Compact unit with gear pump
- 2 clamping circuits (extendible), circulation valve
- max. operating pressure 210 bar
- Max. output flow 4,5 l/min

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic screw-in cylinder | single acting

Operating pressure max. 350 bar/min 100 bar

These hydraulic screw-in cylinder are single acting and with spring retraction. They can be used in clamping fixtures for positioning, clamping and gripping of workpieces.

Technical characteristics

- Only suitable for operating pressures starting from 100 bar
- Use for pipe connections and for integrated oil supply (sealing on the cylinder's base with a seal which is delivered with the unit)
- External thread along the whole length of the housing
- Narrow distances between the cylinders are possible when the cylinders are mounted in groups
- Spring retraction
- Slide ring seals with high wear resistance
- No stick-slip effect
- Piston rods with internal thread on all Models starting from Model 721E16121-1 onwards

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

Included accessories

DELFIN seal ring

Recommended accessories (separate Order)

- Hexagonal nut DIN 936
- Groove nut DIN 1804
- Straight screw-connection D8S-R1/8
- Straight screw-connection D8S-R1/4

Important Note

The maximum spring retraction force has been taken into account in the clamping force values diagram.

The operating pressure should not exceed 150 bar if the piston is actuated without a counter force.

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic screw-in cylinder | single acting

Operating pressure max. 250 bar/min 100 bar

These hydraulic screw-in cylinder are single acting and with spring retraction. They can be used in clamping fixtures for positioning, clamping and gripping of workpieces. Flexible applicable because of the radial and axial ports.

Technical characteristics

- Suitable even for operating pressures under 100 bar
- 1 oil port radial, one axial
- External thread along the whole housing
- Spring retraction
- O-ring-seal
- Piston rod with internal thread

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic screw-in cylinder | double acting

Operating pressure max. 350 bar/min 100 bar

These hydraulic screw-in cylinder are double acting. They can be used in clamping fixtures for positioning, clamping and gripping of workpieces. Such cylinder should be used if rapid and precise stroke speeds are required or when high retraction forces are needed.

Technical characteristics

- Hydraulic ports at the cylinder bottom
- External thread along the whole housing
- Glide ring seal with high wear resistance
- No stick-slip-effect
- Double piston-rod seal
- An extended piston rod guide assures high stability when transversal forces occur
- Piston rod with internal thread

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic short stroke cylinder | double acting

Operating pressure max. 350 bar/min 100 bar

These double action hydraulic short-stroke cylinders are primarily used for operating double action hydraulic punching, notching and cutting units. Furthermore, they can be used as clamping cylinders. The double action version allows rapid stroke speeds. The cylinders are mounted to the hydraulic punching units with the help of mounting flanges. Adequate mounting flanges available on request.

Technical characteristics

- Optimal piston rod guide; hardened piston rod for protection against corrosion and wear and for better gliding.
- Fine-grinded, polished slide faces for the lip seal and the piston rod improve the service life and the function of the seals.
- Lateral oil ports, additional advance stroke connection on the cylinder base

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

Included accessories

2 x reducing nipples GWR-3/8-1/4 (only 725D80151-1)

Recommended accessories (separate Order)

2 x straight screw connectors D8S-R1/4

Mounting flange

Grooved or hexagonal nut (see page 20 and 24)

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic block cylinder | single acting

Operating pressure max. 500 bar/min 100 bar

This hydraulic block cylinder are single acting with spring retraction. Due to their block shape design, hydraulic block cylinders can be used in a wide range of applications, e.g. clamping, punching, pressing, aligning.

The factory made mounting holes allow easy and quick mounting of the cylinder in the horizontal or vertical position.

Technical characteristics

- Suitable for operating pressures starting from 100 bar onwards.
- Lateral hydraulic connection
- Spring retraction
- Convertible to a double action cylinder
- Glide ring seal with high wear resistance
- No stick-slip effect
- An extended piston rod guide gives high stability when transversal-forces occur
- Piston rod with internal thread

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

Important Note

The maximum spring retraction force has been taken into account in the clamping force values.

The operating pressure should not exceed 150 bar if the piston is actuated without a counter force.

Recommended accessories (separate Order)

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic block cylinder | double acting

Operating pressure max. 500 bar/min 100 bar

Hydraulic double acting block cylinders are particularly suited for applications requiring frequent cycles and rapid stroke speeds. The block design allows a wide range of applications such as clamping, pressing, aligning and punching. The mounting boreholes are a further advantage which allow quick and easy mounting in the horizontal or vertical position.

Technical characteristics

- Lateral hydraulic connections
- No stick-slip effect
- Double piston rod seal
- An extended piston rod guide assures high stability when transversal forces occur on the piston.
- Piston rod with internal thread

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic hollow piston cylinder | single acting

Operating pressure max. 350 bar/min 100 bar

These hydraulic cylinders are single acting with spring retraction. A typical application for hydraulic hollow piston cylinders is when pulling and/or pushing forces are needed for clamping. The piston inserts which can be mounted in the thread on the top end of the piston are used to secure threaded bolts or screws. The piston inserts are available with the internal thread (type A) or with the through-hole (type B).

Technical characteristics

- Cylindrical and Block version available
- Cylindrical version available with- or without external thread
- Spring retraction
- Piston with through-hole (different piston inserts available)
- Piston nitrogen hardened
- Fastening threads at the base
- Lateral hydraulic connection

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

Important note

The operating pressure should not exceed 100 bar if the piston is actuated without a counter force.

Recommended accessories (separate Order)

1 straight screw connectors D8S-R1/8

1 straight screw connectors D8S-R1/4

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic hollow piston cylinder | double acting

Operating pressure max. 350 bar/min 100 bar

Hydraulic hollow piston cylinders can solve many clamping problems because they can also be used as pulling cylinders due to the hollow piston combined with a tie rod. The double action principle allows short stroke times and high retraction forces, i.e. clamping forces in the reverse stroke direction.

Technical characteristics

- Piston with through-hole and with internal thread
- 2 fastening threads at the base
- Lateral hydraulic connections

CUSTOMER DESIGNED Models

If you need a special cylinder for your application – customer designed Models are available. PLEASE LET US KNOW!

Important note

The operating pressure should not exceed 250 bar if the piston is actuated without a counter force.

Recommended accessories (separate Order)

2 straight screw connectors D8S-R1/4

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic swing clamps | double acting

Hydraulic swing clamps are particularly designed for applications which require high clamping forces and easy loading of workpieces in confined spaces.

Standard version

Double acting swing clamps

Cylinder with helical pivoting. The cylinder swing around 90° with swivel stroke and continue to the vertical clamping stroke. Complete stroke = swivel stroke + clamping stroke. Available in block-, screw-in-, top flange- and base flange version.

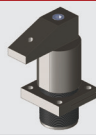

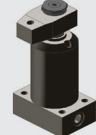

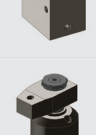

Compact version

Double acting swing clamps

Cylinder with rotation in a plane. The cylinder swing around 90° without stroke movement, continue to the vertical clamping stroke. Complete stroke = clamping stroke. Available in top flange-, base flange- and block version

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic swing clamps – Standard version

Swing clamp-screw-in version

- Double acting version
- More accessories under accessories standard

Technical note:

- Clamping must be accomplished in the vertical stroke range.
- The clamping arm cannot be impeded during swivel.
- The cycle time for a clamping or a unclamping stroke should not fall under 1,5 s. If necessary, the oil flow must be reduced. Observe the max. permitted oil flow.

Model no.		operating pressure		Clamping force	volume flow	stroke		OI consumption		Connection	Weight

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic swing clamps – Standard version

Swing clamp-top flange version

- Double acting version

Optional

- Position control
- Piston with indexing for high repeat accuracy
- Other angle of rotation 0°, 45°, 60°
- Bigger stroke
- More accessories under accessories standard

Technical note:

- Clamping must be accomplished in the vertical stroke range.
- The clamping arm cannot be impeded during swivel.
- The cycle time for a clamping or a unclamping stroke should not fall under 1,5 s. If necessary, the oil flow must be reduced. Observe the max. permitted oil flow.

See table for max. torque for arm screw.

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic swing clamps – accessories Standard

Safe connection

The adaptors were developed to ensure a safe connection between your own manufactured clamping arms and the piston rods of the swivel clamping cylinder.

Important note

Please ensure that the distance of the clamping point of your own manufactured clamping arm is identical with the dimension l1 in the tables . If dimension l1 and/or the weight is increased, the operating pressure must be reduced in accordance with the diagrams shown below.

HYDRAULIC CLAMPING TECHNOLOGY

Lever clamp

Lever clamps are primarily meant for individual cases, where the clamping position needs to be free for handling once the workpiece is clamped.

Compared to swing clamps, lever clamps have a more compact construction and higher clamping force. Lever clamps are especially meant for those cases, where bothering contours make the use of swing clamps unsuitable.

Technical features

- 3 different sizes
- Since the clamping lever has a movable position, the clamping point can be fully released.
- In horizontal position the clamping lever provides its optimal clamping force
- Workpiece tolerances with a position deviation of appr. +/-8.5° can be compensated easily.
- With metal scraper

Optional available:

- The lever clamp cylinder can be equipped with full-length piston rod. The sensing can be made through inductive proximity switch or pneumatically.
- Special designed lever on request
- Lever clamp with O-Ring flanged connection (-02) oder Cartridge version (-03)

Recommended accessories (separate Order)

2 x straight screw connections **D8S-R1/8** or **D8S-R1/4**

Available versions:

With threaded connection G1/4
Model no. -01

with O-Ring flanged connection

Guidance for special clamping lever

732D16HSZY-01

732D25HSZY-01

732D40HSZY-01

- Standard clamping lever
- Drawing example
- Calculation example

Values from diagram:

max. operating pressure $P_{max} = 350$ bar
 $F_{max.}$ at a $P_{max.}$ $F_{max} = 4$ kN
 Clamping lever length $L = 33$ mm
 Operating pressure $P = 300$ bar
 Resulting clamping force $F = 3,43$ kN

Solution:

$$\text{Clamping force } F = F_{max.} \times \frac{P}{P_{max.}} = 4 \text{ kN} \times \frac{300 \text{ bar}}{350 \text{ bar}} = 3,43 \text{ kN}$$

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic power clamp | double acting

Operating pressure max. 250 bar

These power clamps are used where a high clamping force is needed combined with small clamp dimensions. The clamps are equipped with double oil connections for the clamping and opening procedures. This makes it easy to connect pipes when the clamps are arranged close together. If necessary, the cylinder body (after removal of the fastening screws) can be turned 90° in relation to the clamp. The stated clamping force of 5kN at 100 bar oil pressure is achieved only within the last 4 mm of clamping arm movement.

Technical characteristics

- Short clamping cycles with the double action version
- High clamping force with small dimensions
- Tolerance compensation of up to 4 mm at constant clamping force
- Optional: special clamping arm available

Recommended accessories (separate Order)

2 straight screw connections, Order no. **D8S-R1/8**

(with special designed clamping arm)

Model no.	version	max. operating pressure	Clamping force at 100 bar	Tolerance compensation	Oil consumption forward stroke	Oil consumption back stroke	Connection	Weight

7011-5	double acting	250	5	4	25,7	15,5	4 x G1/8	3,8

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic edge clamp | single acting

Operating pressure max. 500 bar

Edge clamps are mainly used where workpiece clamping "from the top" is difficult or impossible. Its small design is an advantage where space is limited. The clamp is equipped with 2 hydraulic connections. Both connections are linked via a transverse hole. This allows the possibility to link the edge clamps directly if several clamps are to be operated simultaneously.

Technical characteristics:

- Spring retraction
- Clamping lever with or without ball element
- The hold down force is the vertically (downward) acting component of the clamping force

Recommended accessories (separate Order)

1 straight screw connection, Order no. **D8S-R1/4**

Model no. 733E03701-1

Model no. 733E03702-1

HYDRAULIC CLAMPING TECHNOLOGY

Pressure accumulator control unit | double action

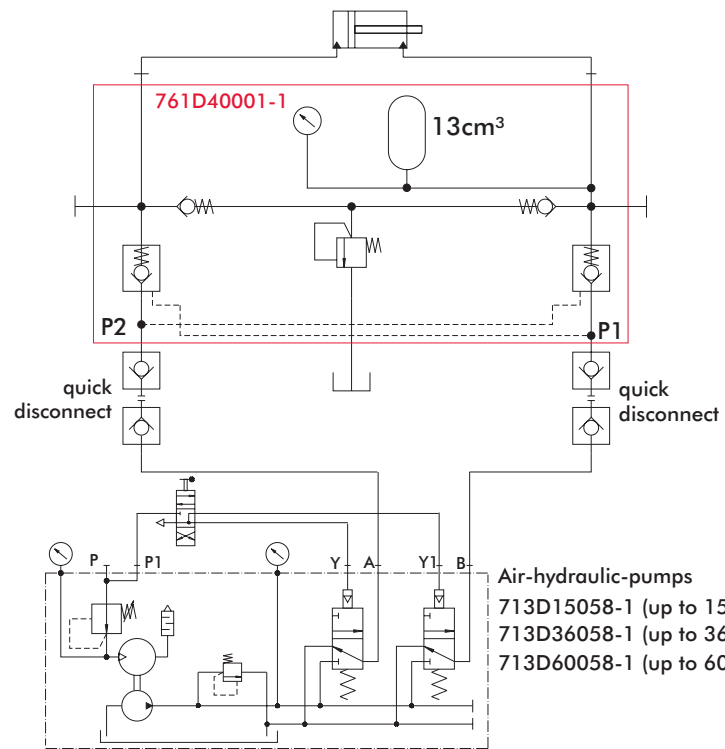

Pressure accumulator control unit, double action Operating pressure max. 400 bar

The pressure accumulator control unit is used in those applications where hydraulic clamping devices are disconnected from the pressure generators, e.g. on flexible production systems with hydraulic clamping devices, CNC machine tools in conjunction with palette exchangers.

The main task of the pressure accumulator control unit is to compensate for pressure fluctuations and in the event of any minor leakages to prevent sudden drops in pressure.

Control is effected only via the air hydraulic pump. Switchover is automatically controlled by an internal back pressure valve inside the pressure control unit which avoids the necessity to fit an additional manual valve.

The protection for the pressure control unit is guaranteed by the integrated pressure relief valve.

Model no.	max. operating pressure [bar]	Pressure relief valve set at [bar]	Gas pressure [bar]	Accumulator volume [bar]	Connection	Weight [kg]
761D40001-1	400	400	100	13	G1/4	5,4

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic rotary unions

Operation pressure max. 400 bar

Rotary unions transfer hydraulic oil from a fixed to a rotating machine part. The assembly is done in the rotating axis of the subassembly. Depending on the number of junction levels several single or double acting hydraulic elements can be connected. On principle, the rotary coupling is only suitable for hydraulic oil. If pneumatic shall be transferred, the catalogued elements can be used providing that the air is filtered and lubricated to guarantee seal greasing and corrosion protection.

Technical features:

- 2 versions per size
- Suitable for hydraulic, pneumatic and vacuum

Optional:

- Rotary valve unions

Model no.	nominal diameter	Connections	Rotations* 1/min	Leakage rate cm ³ / 100h	Connection standard ports	Connection leakage port	Weight [kg]

The rotary coupling must be mounted in a way that no transverse moment is effected on the standing or rotating element. It has proven to be best to screw the rotating housing with its ports towards the clamping devices and to protect the rotating piston only against twisting (no initiation of bearing forces). The line connection from the torque support to the rotating piston should be done via hoses only.

The rotary coupling may only be taken into operation when all junction levels are connected to the power unit in Order to guarantee the necessary seal lubrication.

The multiple passage rotary couplings have axial and radial G1/4 threaded ports in the rotating piston. In addition, they can be connected axially at the rotating piston with O-Rings 16 x 2. In this case, please calculate the necessary screw forces of the fixing screws imperatively

Assembly example

Hydraulic pressure control valve

This valve can be used in hydraulic systems where further pressure increase must be prevented after the pressure pre-set at the valve has been achieved. Furthermore, the valve allows to operate two or more clamping circuits at different pressure levels.

Function

The valve blocks the flow to a connected unit when a preset pressure level is achieved within the user line.

When pressure drops at connection "A", the valve opens, allowing the pump to build up pressure again. The valve works leakagefree.

Symbol:

Connection example:

Model no.	Mounting position	max. operating pressure [bar]	Setting range min. [bar]	max. [bar]	max. flow volume [l/min]	Flow direction	Connection	Weight [kg]
70980-D3	beliebig	380	30	380	12	P --> A	G1/4	1,3

Hydraulic throttle valve with reverse free flow

Hydraulic throttle valves are used as restrictor valves in hydraulic systems. Their flow resistance is changed by adjusting the diameter of the restrictor; this regulates the flow volume. In the opposite flow direction, the flow is not restricted.

Symbol:

Model no.	Mounting position	max. operating pressure [bar]	max. flow volume [l/min]	flow direction		Temperature range	Connection	Weight [kg]
				throttled	free			
70981-D	beliebig	500	15	G -->F	F -->G	-40°...+80°C	G1/4	0,4

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic valves

Hydraulic opening valve, direct control

The use of hydraulic opening valves is recommended in applications where 2 or more hydraulic cylinders have to be operated in sequence or where workpieces have first to be positioned and then clamped.

Function

Hydraulic opening valves are mounted into the feed line of hydraulic cylinders which have to be actuated with a delay. Opening valves only open when the pre-set pressure is achieved or exceeded.

Symbol:

Connection example:

Model no.	Mounting position	max. operating pressure [bar]	Setting range min. [bar]	max. [bar]	max. flow volume [l/min]	Flow direction	Connection	Weight [kg]
70982-D3	optional	350	20	250	40	P --> A	G1/4	0,4

Back pressure valve with hydraulic release

Back pressure valves serve to avoid pressure drop in pressurised cylinders as a result of leakage in the directional control slide valve. Furthermore, back pressure valves are used where hydraulic cylinders must be blocked for safety reasons in case of control valve failure.

Function

Flow direction A → B blocked, B → A open. The flow direction A → B (blocked) can be released by hydraulic pressure to Z.

Symbol:

Model no.	Mounting position	max. operating pressure [bar]	max. flow volume [l/min]	Temperature range	Connection	Weight [kg]
70983-D	optional	700	15	-40°...+80°C	G1/4	0,3

Hydraulic high pressure shut-off valve

Hydraulic high pressure shut-off valves are used for blocking hydraulic lines, e.g. in case one or more cylinders in a hydraulic clamping circuit must be temporarily shut-off.

Symbol:

Model no.	Mounting position	max. operating pressure [bar]	body	Material			Connection	Weight [kg]
				ball and shaft	ball seal	shaft seal		
70984-D	optional	500	steel	steel chromed	polyamide	perbunan	G1/4	0,4

Hydraulic 4/3-way manual ball valve

Hydraulic 4/3-way manual ball valves are used e. g. for direct control of hydraulic cylinders in single or double action systems.

Model no.	schematic diagram	Mounting position	max. operating pressure [bar]	max. flow volume [l/min]	Temperature range	Connection	Weight [kg]
70911-1		optional	350	15	-20°....+70°C	G1/4	0,3

70913-1		optional	350	15	-20°....+70°C	G1/4	0,3

HYDRAULIC CLAMPING TECHNOLOGY

Hydraulic accessories

Electro-hydraulic piston pressure switch

Electro-hydraulic pressure switches are devices which close or open electrical contacts when pressurized. They are usually used for all applications where a electrical signal should be triggered whenever the set pressure is achieved or exceeded. This signal may be utilized to start a subsequent operation cycle or to stop an operation cycle.

Recommended accessories:

Straight screw connection **D8S-R1/4**

Model no.	Pressure range [bar]	Temperature range [°C]	Mounting position	Switching precision [l/min]	max. switching frequency [1/min]	Portection	Permitted current load	Weight [kg]
70-DG34-1/4	100-400	-20 to +80	optional	±2...3%	30	IP65	2A	0,4

Electronic pressure switch

The electronic pressure switch apply wire strain gauges with full bridge circuitry. The adaptation and evaluation of the signal output is via analogous electronics.

- Two fully-electronic PNP-outlets (switching plus)
- Two LED's (yellow) as switching status indicators
- adjustment via 2 rings with scales
- plombable

Recommended accessories:

- Gauge screw connection **MV8S** or **MVE8S**
- KConnection socket 4-pin M12x1 (5m cable) **8EL-003-1**

Model no.	Pressure range [bar]	Temperature range [°C]	Mounting position	Switching precision [l/min]	Hysteresis	Protection	Voltage [VDC]	Permitted current load [mA]	Weight [kg]
70-DG64-1/4	0-400	-25 to +80	optional	±2,5%	2%	IP67	9,6...32	max. 500	0,8

Hydraulic gauge with glycerin filling

Max. operating pressure 0-600 bar

Recommended accessories:

- Gauge screw connection **MV8S**

Model no.	Pressure range [bar]	Connection	Weight [kg]
70925-214	0-600	below	0,25

Hydraulic quick connectors

Technical features

- Minimal pressure drop due to unobstructed flow
- Drop free connection or disconnection
- Automatic safety function
- Dust cap supplied as standard

Note: not connecting or disconnecting under pressure/load
